

## **Fire Extinguishers:**

University buildings are equipped with fire extinguishers in accordance with the requirements of the construction and/or fire safety codes. Students and employees are not expected to utilize these devices, nor are they trained in their use due to the danger of their personal safety, which would result from attempting to extinguish a fire.

### **Extinguisher Locations**

Extinguishers are kept in the following locations on campus:

- **Fire Extinguisher Cabinets** - smaller, less-conspicuous cabinets usually located in exit corridors and recessed into the walls. This is a common extinguisher location in newer buildings.
- **Wall-mounted Brackets** hold extinguishers that are not stored in cabinets. This method keeps extinguishers in plain view on the walls, and is most common in laboratory work areas, workshops, and large office suites.

### **Extinguisher Inspection Stickers**

Fire Prevention Services personnel attach paper tags to extinguishers that are hole-punched to indicate the month and year of the last maintenance inspection.
