

## Methodology

The poll of New Jersey adult residents was conducted by the Stockton Polling Institute of the William J. Hughes Center for Public Policy from Oct. 26-Nov. 15, 2022. Stockton University students texted cell phones with invitations to take the survey online and Opinion Services supplemented the dialing portion of the fieldwork, which consisted of cell and landline telephone calls. Overall, 90 percent of interviews were conducted on cell phones and 10 percent on landline phones. In terms of mode, 79 percent were reached via dialing and 21 percent were reached via text-to-web. A total of 570 New Jersey adult residents were interviewed. Both cell and landline samples consisted of random digit dialing (RDD) sample from MSG. Data are weighted based on U.S. Census Bureau American Community Survey data for New Jersey on variables of age, race, ethnicity, education level, sex, and region. The poll's margin of error is +/- 4.1 percentage points at a 95 percent confidence level. MOE is higher for subsets.
